

TMS Maritime is a leading UK specialist in marine civil engineering, ancillary floating plant and diving services

Client: **National Trust**

Project: **New Slipway, Brownsea Island, Poole**

Requirement:

A new slipway for the National Trust at Brownsea Island.

Solution:

TMS undertook this work on behalf of Land and Water for the National Trust. Temporary sheet piles were driven to form the extent of works; these became part of the permanent works as the scheme progressed. Working within the tidal zone, an in-situ reinforced concrete deck was formed within the sheet piles. Timber fendering was then affixed to the edges of the deck.
