

TMS Maritime is a leading UK specialist in marine civil engineering, ancillary floating plant and diving services

Client: **Bognor Regis Yacht Club**

October 2014

Project: **Slipway Construction**

### Requirement:

Design, construction and commissioning of a new 34 x 3 metre beach slipway, for dinghy launches and recovery, used during a busy annual schedule of club racing and open meetings.

### Solution:

Working as the main contractor, **TMS** installed 22 x 6 meter greenheart piles, using one of their new high speed Movax pile driving units; together with longitudinal beams and braces, and decking in Ekki. This created a new working slipway from the dinghy park to sea level at low water.

The club's independent project engineer, praised TMS Maritime for their quality, timely completion of the project, project management, safety and skills.

His commendation ended with the words, "the whole slipway is a beautiful work of craftsmanship. The site was cleared upon completion to such a degree that the next day it was impossible to identify the area as a working site".
