

TMS Maritime is a leading UK specialist in marine civil engineering, ancillary floating plant and diving services

Client: **Environment Agency / Interserve**

Duration: 12 weeks

Project: **Teignmouth Sea Wall Emergency Repairs**

Value: £215,000

New Years Eve 2015

Requirement:

TMS Director Peter Stenner received a call on New Years Eve 2015, requesting attendance at Teignmouth Sea Front adjacent to the light house and point car park as substantial voids had been found due to extreme weather impact on the sea wall.

Solution:

TMS were engaged on an emergency order to attend site with labour and plant to clear out the voids and pump in concrete to fill the voids and to return stability to the sea wall and pavement.

This solution required swift mobilization of plant and equipment over the New Years holiday to react to the seriousness and danger of the wall collapsing into the sea.

Following these works, a permanent works solution was designed and TMS were engaged to install a protective sheet piled wall and further concreting and landscaping works
